Project 1

Data Analytics Process

Application in Real Life Scenario Case Study / PPT

Planning to choose a data analytics online course

Plan

   Deciding whether to study Data Analytics and how much interest I have about it

Prepare

   We then have to set of expectations and the fee we are willing to shell out on the course

Process

   We then need to search on the web or social media to find out number of courses available and collect data such as fee, ratings, placement stats and quality of the training

Analyse

   We then need to process the data we collected and rank on the expectations we previously had set out and make a beautiful graph if needed

Share

   Then we need to share out results with our parents and explain what we have decided... (they are the one's spending the money 😊)

Act

   Then you finally enrol into the course we have chosen based on the data collected and analysed... (and Study hard).
